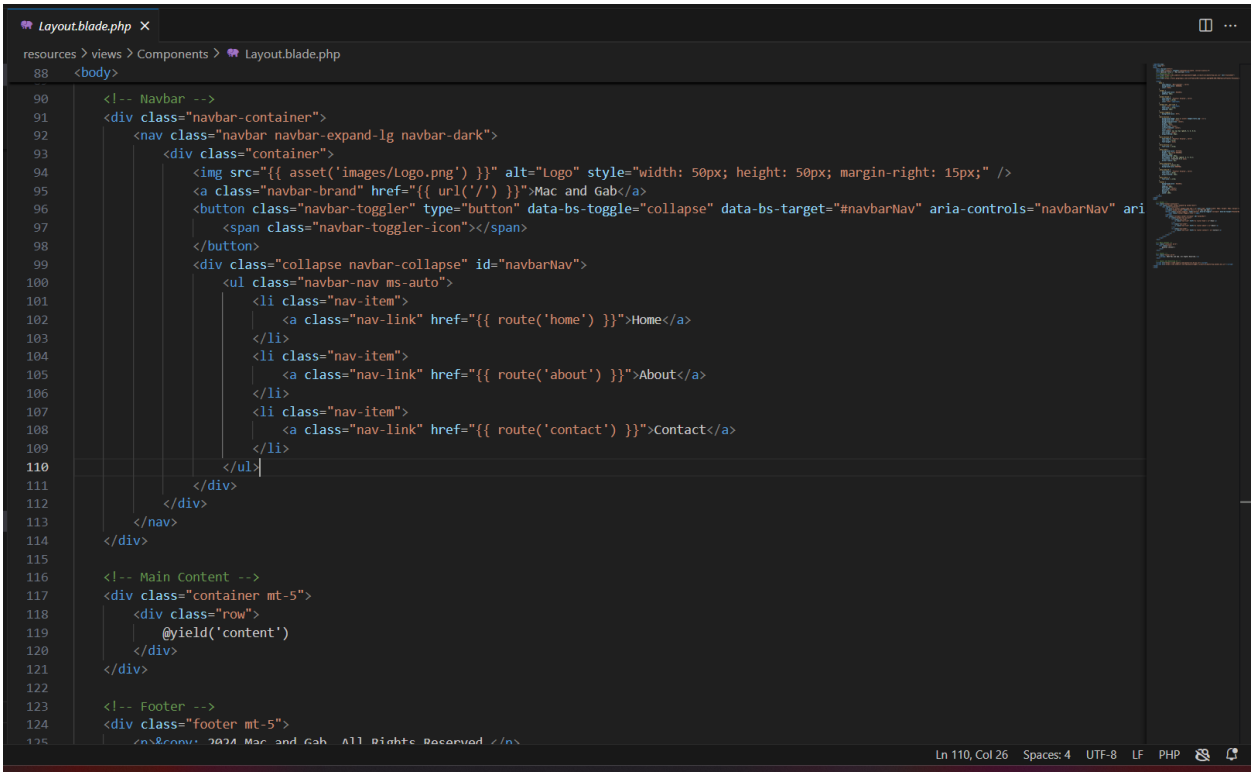
Layout File

This file is in the component folder in view, the function of this is to remove redundancy of the content in every blade files such as, navigation, footer, and other common code from blade files. Its purpose is to give consistency for every pages.



Extends and section

Each blade file has @extends and @section, the function of @extends directive is to tell Laravel that the view is using specific layout, the function of the @section directive shows the uniqueness of the views, showing the content of each blade file.

home.blade.php M

resources > views > home.blade.php

```
@extends('Components.Layout')

@section('title', 'Home')

@section('content')
<div class="hero-section">
    <div class="container">
        <h1>Welcome to Mac and Gab</h1>
        <p>We are happy to fulfill your cravings</p>
    </div>
</div>

<div class="container">
    <div class="row">
        <!-- Messages Section -->
        <div class="col-md-12">
            @if(session('error'))
                <div class="alert alert-danger">
                    {{ session('error') }}
                </div>
            @endif
            @if(session('order_placed'))
                <div class="alert alert-success">
                    {{ session('order_placed') }}
                </div>
            @endif
            @if(session('order_canceled'))
                <div class="alert alert-info">
                    {{ session('order_canceled') }}
                </div>
            @endif
        </div>

        <!-- Main Content Area -->
        <div class="col-md-9">
            <!-- Search Bar -->
            <div class="search-bar mb-3">
```

Web

The basic routes /home, /about, /contact that will display the 3 views.

For the default home route uses the Home controllers index to serve homepage.

The ordering management routes the /add, /place/removes is a method where can be found in OrderController and serve a function.

For contact submitting in sending the form data form the contact page to the submit method in ContactController
